

# MTH 140 - Quiz 8

Sunday, March 31, 2024 4:26 PM

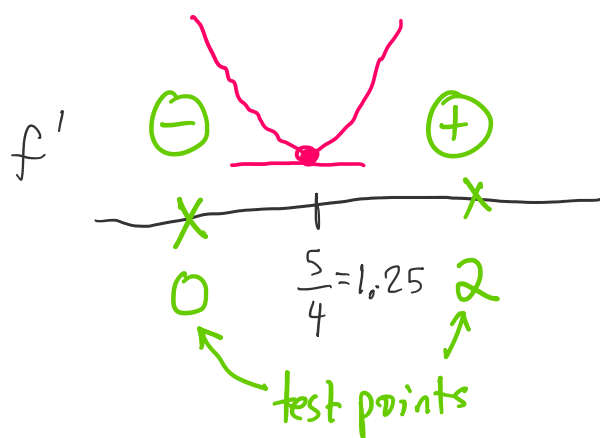

$$f(x) = 2x^2 - 5x + 2$$

find critical points:

$$f'(x) = \boxed{4x - 5 = 0} \quad \text{set}$$

↓ solve

$$\left(\bar{x} = \frac{5}{4}\right) \text{ one critical point}$$

plug critical points into  $f'$ :

$$f'(0) = 4(0) - 5 = -5 < 0 \ominus$$

$$f'(2) = 4(2) - 5 = 3 > 0 \oplus$$

$\Rightarrow$  Value of  $f$  at critical point:

$$f\left(\frac{5}{4}\right) = 2\left(\frac{5}{4}\right)^2 - 5\left(\frac{5}{4}\right) + 2$$

$$= \frac{50}{16} - \frac{25}{4} + \frac{8}{4}$$

$$= \frac{25}{8} - \frac{50}{8} + \frac{16}{8}$$

$$= -\frac{25}{8} + \frac{16}{8} = -\frac{9}{8}$$

$\Rightarrow$  Local minimum of  $-\frac{9}{8}$  occurs at  $x = \frac{5}{4}$ .

1   $2x^2 - 5x + 2$  ✕
